JAVA PROJECT PRESENTATION

# Hotel Room Reservation and Guest Management System

Presented by M. KATHIRAVAN

Register No: 25BCS226

KG College of Arts and Science

Academic Year: 2025-2026

# INTRODUCTION

A Java-based system designed to streamline hotel operations and enhance guest experience.

- Developed using **Java**
- Manages hotel room **reservations**
- Maintains **guest information**
- Efficient **billing** management
- Reduces **manual work**

# OBJECTIVES

- Develop a hotel reservation system
- Manage room bookings effectively
- Store guest details securely
- Automate billing process
- Improve operational efficiency

# EXISTING SYSTEM

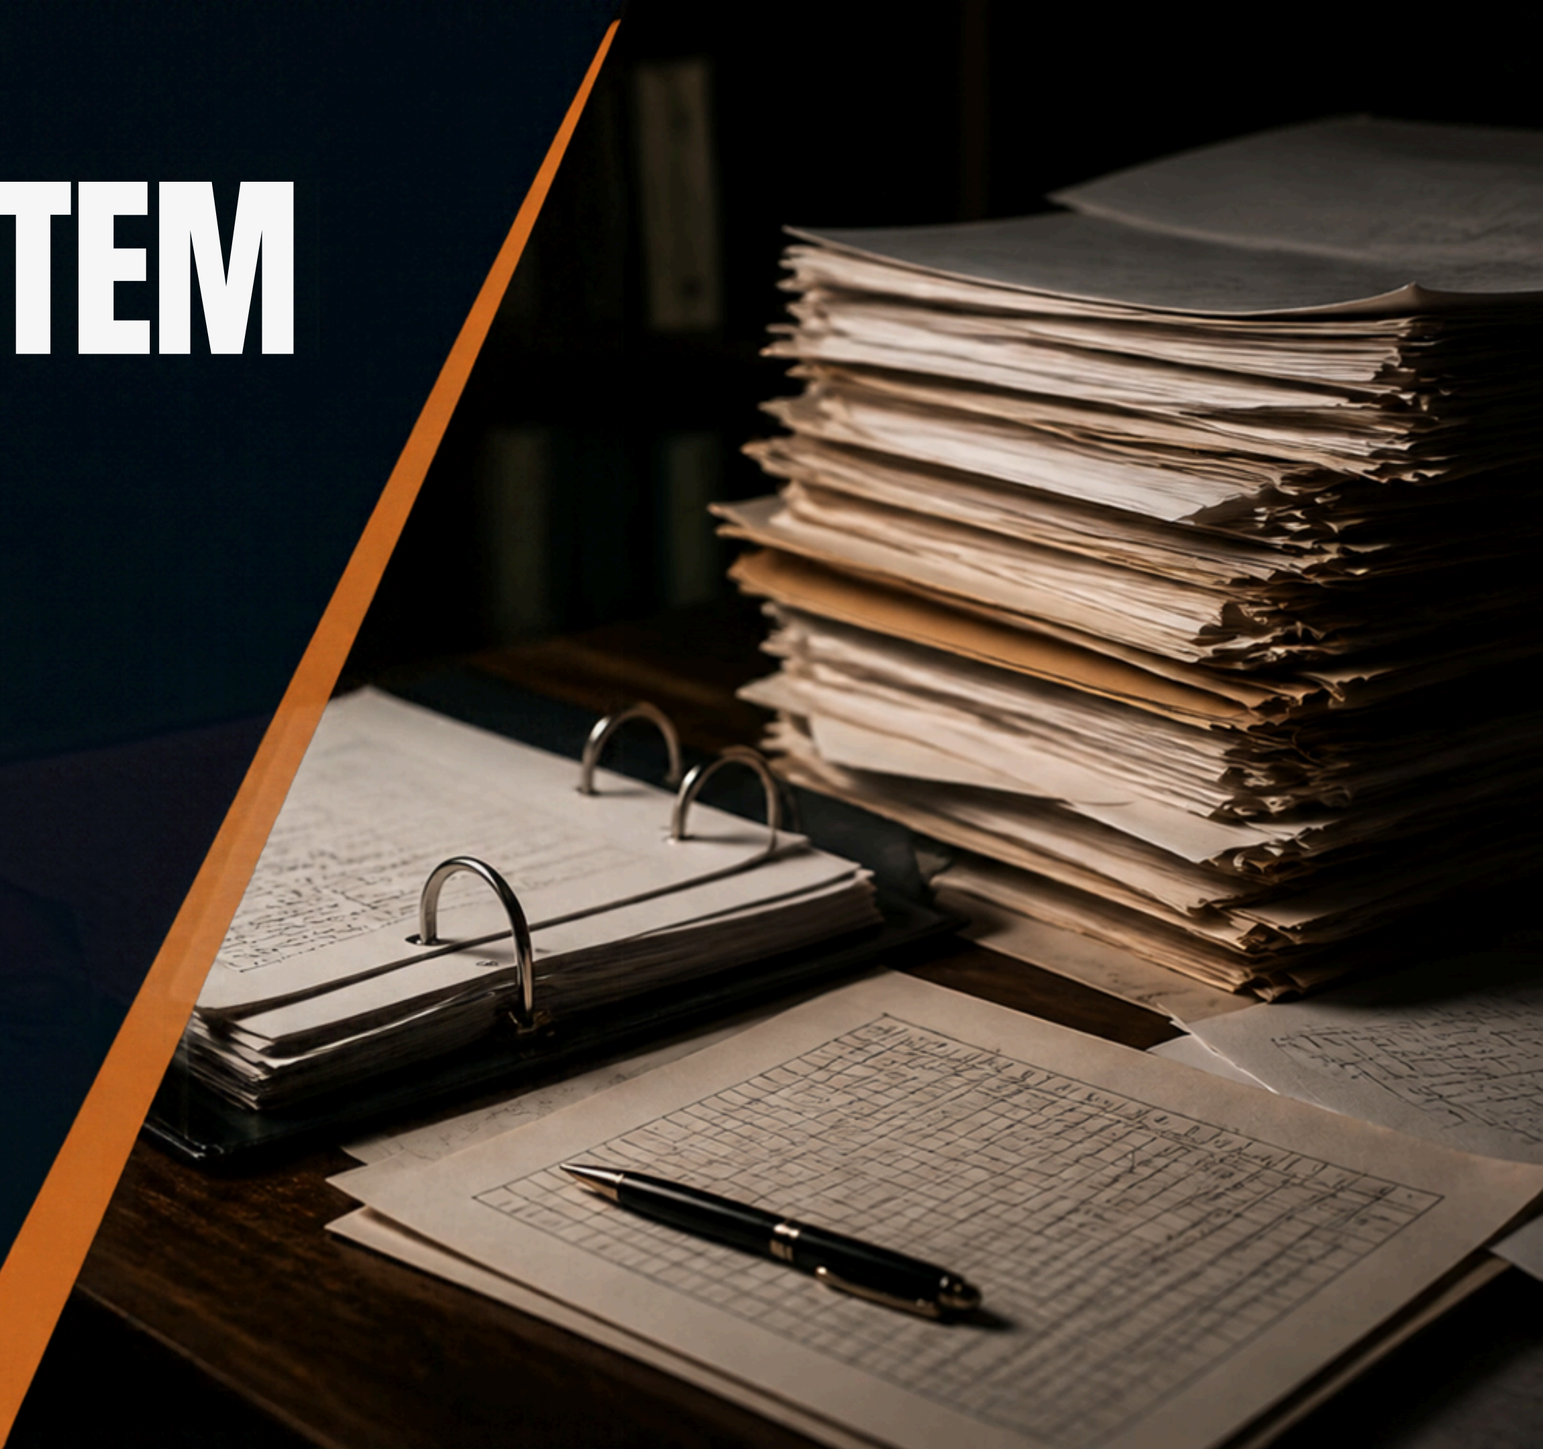
**Manual** booking and record keeping

Excessive **paperwork**

Time-consuming **billing**

Difficulty tracking room **availability**

Prone to human **errors**



# PROPOSED SYSTEM

**Advantages** of the new computerized approach.

- Computerized **reservation management**
- Easy **room selection** interface
- Guest **information management**
- Automatic **bill calculation**
- Faster and **organized operations**

# SYSTEM MODULES

- Room Management
- Reservation
- Guest Management
- Billing
- Invoice Generation

# TECHNOLOGIES USED

Programming Language

**Java**

Application Type

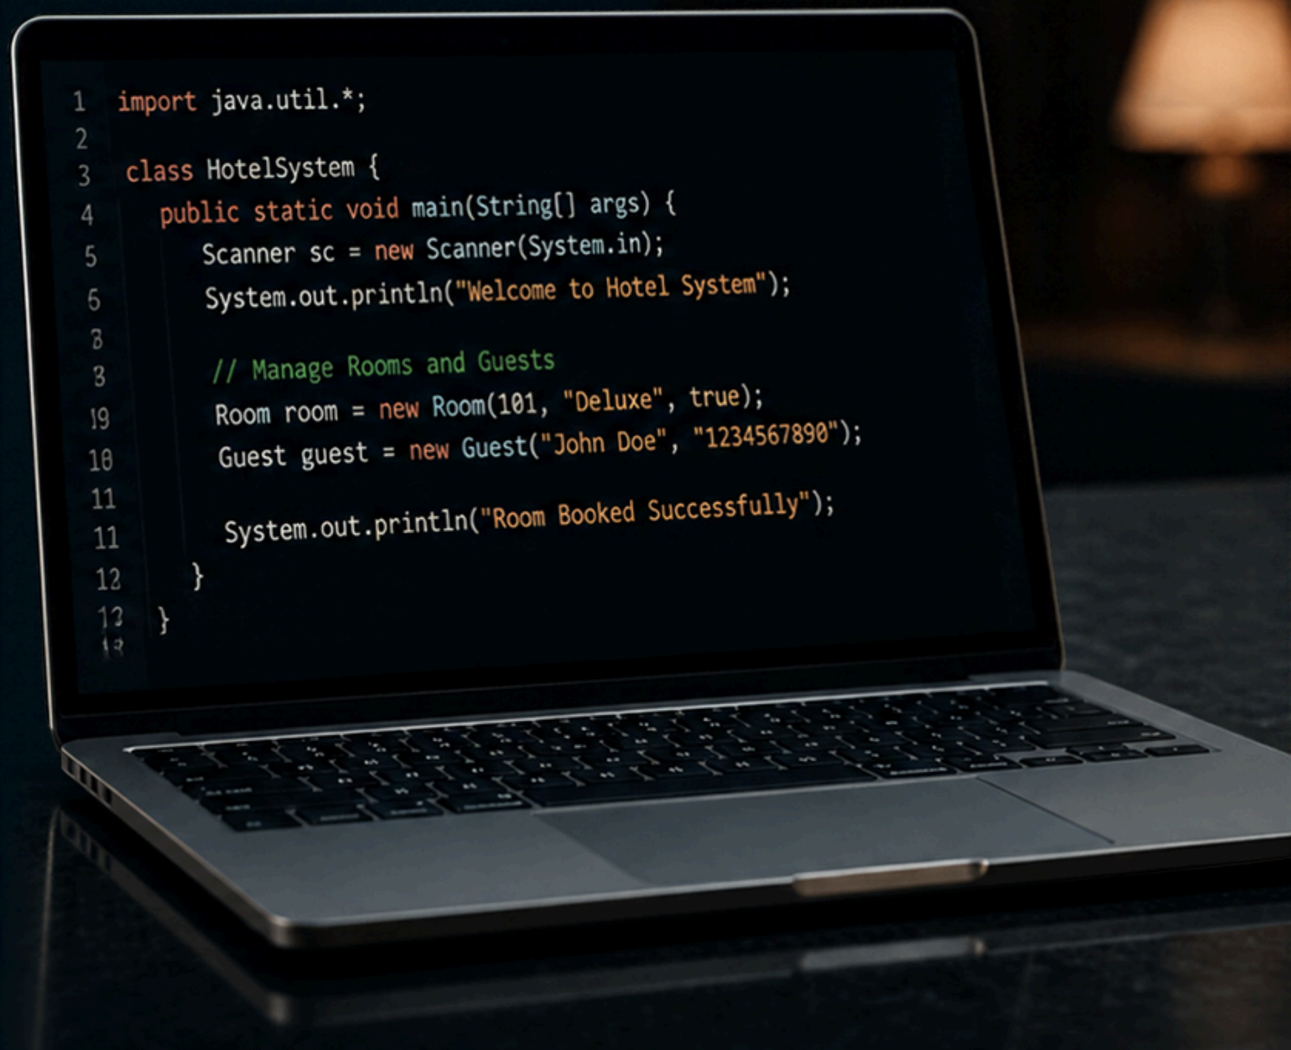
**Console-based application**

Core Concepts

**Classes and Objects**

Data Handling

**Guest and room records**



# ALGORITHM

Step-by-step process flow of the program.

01 Start the program

02 Display menu

03 Select a room

04 Enter guest details

05 Calculate the bill

06 Display the result

07 End the program

# ADVANTAGES AND CONCLUSION

- Saves time and reduces manual work
- Organizes guest records efficiently
- Simplifies room booking
- Eases billing process
- Enhances hotel management efficiency

**A smarter system for better hospitality**
